

### **In the Abstract**

***Kindly replace the Abstract now of record with the following:***

The present invention relates to ~~a~~A device for the ~~distribution of~~distributing a liquid ~~or~~, viscous or ~~pasty~~ product ~~in order for it to be retrieved~~retrieval with a tool or by the ~~hand of~~ a user, comprising a reservoir (1) for containing ~~this~~the product and emptying in a distribution zone (2, 7) for the retrieval of ~~this~~the product, characterized in that wherein at least a part of the device upstream from the distribution zone is placed under excess pressure and the distribution zone (2, 7) comprises openings for preventing the product from exfiltrating in the absence of an action by the tool or user, and in that the reservoir (1) is placed under anwhich excess pressure that is ~~determined~~adjusted as a condition of the use at a value ~~less~~lower than the pressure ~~that causes the seeping [oozing]~~causing the using of the product when the device is at rest, which pressure is, ~~moreover~~, also sufficient to ~~bring about the~~cause exfiltration of ~~the~~ product ~~ont~~o the distribution zone (2, 7) when the user exerts an action on ~~this~~the distribution zone (2, 7).
